                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DOMAIN: COMPOSED OF THREE HOMOLOGOUS DOMAINS.

DISEASE: Defects in SLC2504 are a cause of autosomal dominant progressive external ophthalmoplegia with various mitochondrial DNA deletions (PEO). Patients with PEO have mitochondrial myopathy, progressive external ophthalmoplegia, and other abnormalities associated with multiple different deletions of mitochondrial DNA.

SIMILARITY: Belongs to the mitochondrial carrier family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GO:0006832; P:small molecule transport; erPro; IPR002067; Mit_carrier. erPro; IPR002030; Mit_uncoupling. erPro; IPR001993; Mitoch_carrier.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            inner membrane (By similarity).

DOMAIN: Composed of three homologous domains.

SIMILARITY: Belongs to the mitochondrial carrier family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FUNCTION: Catalyzes the exchange of ADP and ATP amitochondrial inner membrane.
SUBUNIT: Homodimer (By similarity).
SUBCELLULAR LOCATION: Integral membrane protein.

TITLE OF INVENTION: INTERACTIONS AND METHODS FOR DETERMINING
TITLE OF INVENTION: IDENTIFYING AGENTS THAT ALTER SUCH INTERACTIONS
FILE REFERENCE: 660068.433
CURRENT APPLICATION NUMBER: US/09/434,354
CURRENT APPLICATION NUMBER: US/09/434,354
CURRENT FILING DATE: 1999-11-03
NUMBER OF SEQ ID NOS: 54
SEQ ID NO 48
SEQ ID NO 48
LENGTH: 298
                                                                                               Patent No. 6013858

GENERAL INFORMATION:

APPLICANT: Wallace, Douglas C.

APPLICANT: Wallace, Douglas C.

APPLICANT: Wallace, Douglas C.

APPLICANT: MacGregor, Grant R.

TITLE OF INVENTION: Mouse Lacking Heart-Muscle Adenine

TITLE OF INVENTION: Nucleotide Translocator Protein and Me

NUMBER OF SEQUENCES: 11

CORRESPONDENCE ADDRESS:

ADDRESSE: Greenlee, Winner and Sullivan, P.C.

STREET: 5370 Manhattan Circle, Suite 201

CITY: Boulder

COTY: Boulder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
